

Fast track to the European market for fire detection and fire alarm system

DELTA and **DBI** - Danish Institute of Fire and Security Technology offer a fast track to the European fire detection and fire alarm system market.

Products for fire detection and fire alarm systems must be tested and certified according to the Construction Products Directive (CPD) 89/106/ECC, before being promoted and sold on the European market. In order to get a product CE marked according to CPD, it is required that products are tested by a notified test laboratory and afterwards certified by a notified certification body.

DELTA and DBI are both independent companies. DELTA performs the type testing and system testing and DBI performs the certification in accordance with the requirements of the Construction Products Directive (CPD).

The Construction Products Directive (CPD) gives new possibilities for manufacturers of fire detection and fire alarm systems. One certificate gives access to the whole European Market. It is

no longer necessary to have the products type tested and certified for individual countries. One test and one certificate is sufficient. DELTA and DBI can provide you with this service in the shortest possible delivery time.

DELTA has 40 years of experience performing type testing of products and systems for fire detection and fire alarms according to the EN 54-series of standards or other relevant harmonised European Norms. DELTA also provides highly qualified consultancy service regarding adaptation to the relevant standards. Furthermore, customers, certification bodies and national authorities recognise DELTA for high quality testing and consultancy within the fields of mechanical and climatic tests and EMC.

CPD notification number 0199

DBI provides you with EC certificates necessary for the CE marking of your products for automatic fire detection and fire alarm systems. DBI also performs Factory Production Control (FPC) at the place of production in accordance with the requirements of Annex ZA to each harmonised standard. The EC certificate is issued based on positive test results and acceptable audit results in connection with the FPC. The EC certificate (CPD-certificate) is the legal document to allow a CE marking of your products.
